NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

On Nov 15, 2002 this sequence version replaced gi:22856341.

The Sequence in this assembly is a combination of BAC based reads and whole genome shotgum sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table bellow represents a caffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold', individual sequence contigs are ordered and criented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgum sequence reads. Both end sequences and whole genome shotgum sequence reads. Both end sequences and whole genome shotgum sequence reads. Both end sequences and whole genome shotgum sequence reads. Both end sequences and whole genome shotgum sequence and the and in the feature denome and the sequence and whole genome shotgum sequence and sequences and sequences and sequence and sequences and sequence and sequences and sequence and sequence and sequences and sequences and sequences and sequence and sequences and seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Center: Baylor College of Medicine

NOTE: This is a 'working draft' sequence It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 yearoune snotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         o

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                   Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences. Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:338-3402) similarity (expect < 18-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
                                                                                                                                                                                                                       STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Exports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              - 200 bases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the factor that their source databases:

It currently consists of 11 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gags between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequencing vector: M13; 87%

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Contact: sequence submissions@genome.wi.mit.edu

                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of a contige. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized agaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 2; Length 245820;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                           CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 local mapping effores.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse Sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 18-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht

Gaps
NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 85.7%; Score 18; DB 2; Length 187214; 100.0%; Pred. The mammalian FOXC2 promoter region for the madulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obesity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the mouse mesenchyme forkhead 1 (MHF-1) protein (also called FOXC2 transcription factor), described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transcription factor; FOXC2; antidiabetic; anorectic; antilipaemic; cardiovascular; FOXC2 polypeptide expression modulator; FOXC2 promoter; diabetes mellitus; obesity; hypercholesterolaemia; dyslipidaemia; cardiovascular disease; gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated human FOXC2 promoter region. The mammalian FOXC2 promoter region for the modulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obesity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the human transcription factor FOXC2, the promoter of which is described in the invention

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) and acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polyuncleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to cupplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the cultic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic concers metastases of haematopoietic antigen genomic sequences from the present invention. AAK45491 to AAK8759 and AAM82169 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, ds, bisulphite treatment, CpG, DNA methylation, cancer, tumour;

The invention relates to a nucleic acid molecule from a moss (e.g., physcomitrella patens or Ceratodon purpureus) encoding a metabolic corporation. A vector comprising a nucleic acid is useful for protein or its portion. A vector comprising a nucleic acid containing the vector such that the fine chemical is produced and then recovered. The cell is a microorganism belonging to the genus containing the vector such that the fine chemical is produced and then recovered. The cell is a microorganism belonging to the genus containing the vector in the corpusator in modulation of the nucleic acid from the vector in the call results in modulation of the production of the fine chemical such as cell results in modulation of the production of the containing troubles are useful for modulating production of fine nucleic acid molecules are useful for modulating production of fine chemicals in microorganisms, algae and plants, either directly or indirectly. Plant genes originating from P. patens are useful for confirmin C, etc., in plants as well as algae and microorganisms, enabling these host cells to increase their capacity to produce the respective components as well as improving survival and fitness of the cell. The nucleic acids are useful for identifying an organism as being P. patens or its close relative in a mixed population of microorganisms, as markers for specific regions of the genome and for evolutionary and protein structural studies. Sequences ABX73119-ABX73160 represent cDNA molecules
                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acids from moss e.g., Physcomitrella patens, encoding a metabolic pathway protein, useful for modifying production of amino acids, vitamins, cofactors in plants, algae and microorganisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigen; anti-inflammatory; respiratory; antibacterial; anti-asthmatic;

chlawydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to vaccinate against Chlawydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in abtheroselerotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids may be used as probes for detecting diagnose infections) and the proteins may be used as antigens for the diagnose infections and the proteins may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins in samples (e.g. via enzyme linked imminosorbant assay (ELISA)). Chlamydophila pneumoniae.

us-09-963-285-1\_copy\_403\_423.rng

```
Dequences ABB90526-ABB90715 represent novel proteins from Chlamydia

Decumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding

them. The proteins are preddicted to be immunogenic and may therefore be

useful in vaccine production and for diagnostic purposes. Chlamydia

also involved in the development of cardiovascular diseases such as

also involved in the development of cardiovascular diseases such as

atherosclerosis, coronary artery disease, carcind artery stenosis,

coronary artery disease, acrtic aneurysm,

cludication and stroke. The proteins and nucleic acids of the invention

may be used in vaccines and pharmaceutical compositions for the

prevention or treatment of chlamydial infections, particularly chlamydia

prevention or treatment of chlamydial infections particularly chlamydia

Chlamydia pheumoniae, and the nucleic acids may be used in the detection of

Chlamydia pheumoniae, and the nucleic acids may be used in PCR, branched

DNA probe assay or blotting techniques for determining Chlamydia

ppecifically claimed DNA which encodes a Chlamydia pheumoniae

specifically claimed DNA which encodes a Chlamydia pheumoniae

the invention. (Updated on 29-AUG-2003 to standardise OS field)
human respiratory disease; cardiovascular disease; atherosclerosis; coronary artery disease; carotid artery stenosis; myocardial infarction; cerebrovascular disease; aortic aneurysm; claudication; stroke; strain CWLO29; open reading frame; ORF; gene; ds.

The nucleic acids may be used for the recombinant production of the chlamydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to vaccinate against chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and athma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins in samples (e.g. via enzyme linked immunosorbant assay (ELISA)). (Updated on samples (e.g. via enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chlamydia antigenes and the proteins they encode, useful for vaccinating against Chlamydia infections that affect the respiratory tract.

14-AUG-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-AUG-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4-AUG-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-AUG-2
 Sequences AAS29814-AAS29838 represent genomic DNA molecules, which encode the cytoskeletal element-related polypeptides of the invention.

Cytoskeletal polypeptides and thear associated polymucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheen, a pathological condition can be determined by determining the presence or absence of a mutation in a cytoskeletal polymucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest.

Corliver, cardiovascular disorders such as cardiac arrest.

Corliver, cardiovascular disorders such as cerebral isohaemia, nervous system disorders such as cerebral isohaemia, nervous system disorders such as corneal infection, endocrine clasorders such as premature labour and infertility, gastrointestinal disorders such as cronn's disease, renal disorders such as asthma. The disorders such as cronn's disease, renal disorders such as asthma. The golypeptides can also be used to aid wound healing, to prevent skin aging to prepare and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Wipo at they brinted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated human cytoskeletal element-related polypeptide useful for diagnosis/treatment of neoplastic disorders, disorders associated with neural transmission, chromosomal abnormalities, autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                    Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Disclosure; SEQ ID NO 10824; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

Davis R;

```
This invention describes a novel mucleic acid (NI) encoding a Chlamydia pneumoniae procein (PI), given in the specification. The isolated nucleic conditions are in its useful for diagnostic and analytical methods, such as, by ridization-based assays or amplification-based assays. The protein may by ridization-based assays or amplification-based assays. The protein may comprising a hybridizen planetion also describes (1) a probe comprising a hybridizing fragment of NI; (2) an isolated nucleic acid (NI) that hybridizes under stringent conditions to NI; (3) an expression cassette comprising NI under the transcriptional regulation of a transcriptional initiation region functional in an expression of transcriptional initiation region functional in an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell, and the callular procent of (4) where the protein is expressed and isolating the protein free of other proteins (6) a purified polypeptide composition comprising at least 50 weight % (6) a purified polypeptide composition comprising at least 50 weight % (6). (Updated on 15-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, Osstrogen receptor beta; ERbeta; ds; SNP; chromosome 6q.25.1; single nucleocide polymorphism; cardiovascular disease; autoimmure disease; systemic lupus erythematosus; arthritis; rheumatism; osteoporosis; breast cancer; endometrial cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 273254 BP; 76423 A; 51054 C; 61965 G; 83812 T; 0 U; 0 Other;

                                                                                                                                          The invention relates to a novel isolated peptide comprising or consisting of an amino acid sequence selected from an amino acid sequence of a variant exergion receptor protein (e.g. ERbeta), or a fragment of 10 amino acids), antibodies against them, nucleic acids encoding them (including vectors for transforming cells). The gene for human ERbeta is calcated on chromosome 64.25.1. The variants are encoded by single nucleotide polymorphisms (SNP). The variant spetides and proteins can be used in assays to determine the biological activity of the protein, to raise antibodies, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, to identify determine levels of the protein in biological fluids, to identify determine levels of the protein in biological fluids, to identify to eximulate or inhibit interaction between the receptor protein and a target molecule that normally interaction between the receptor protein and a target molecule that normally interaction between the protein for e.g. osstrogen. The antibody can be used to isolate the protein determine disease (e.g. systemic lupus erythematosus, arthritis, rhemmanne disease (e.g. systemic lupus erythematosus, arthritis, rhemmacogenomic analysis and inhibiting protein function, e.g. blocking the binding of the oestrogen receptor protein to a binding partner such as a ligand. The nucleic acids encoding the proteins can be used as probes, primers, chemical intermediates and in biological assays. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                Estrogen receptor gene and protein polymorphisms useful for diagnosis of individuals at risk of developing bone disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation;

The present sequence is one of a large number of 5' ESTs derived from mankas encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 3' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' unitanshated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences carried from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                diagnostic, forensic, gene therapy and chromosome mapping procedures
New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 28814; 71pp + Sequence Listing; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1

APPLICANT: Bougueleret, Lydie

TITLE OF INVENTION: Genomic Sequence Of The 5-Lipoxygenase-Activating Protein (FLAP)

Patent NO. 6531279

TITLE OF INVENTION: Polymorphic Markers Thereof And Methods For Detection Of Asthma.

FILE REPERBNCE: GENSET.026A

CURRENT FILING DATE: 1999-04-15

CURRENT FILING DATE: 1999-04-15

CURRENT APPLICATION NUMBER: US 60/091314

PRIOR PILING DATE: 1998-04-15

PRIOR PILING DATE: 1998-04-15

PRIOR FILING DATE: 1998-04-15

PRIOR PILING DATE: 1998-03-08

NUMBER OF SEQ ID NOS: 15

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this schoe. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

The sequencing of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Erro D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DRIAGTS/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                             NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The clone sequenced to the left is CTB-67M9, 2000 bp overlap; the clone sequenced to the right is RP11-115N4. Actual start of this clone is at base position 29168 of CTB-67M9; actual end is at base position 129727 of RP11-20K20.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscogawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                                                            This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polymorphisms exist between RP11-20K20 and CTB-67M9. Data from AC010764 was used to finish this clone, AC084381. Location/Qualifiers
